Dear Ms. Test,

We are pleased to inform you that the results of your bilateral 3D Digital Screening Mammogram performed on Tuesday, October 5, 2021, are normal. We would like you to have a bilateral screening mammogram in 1 year. National breast cancer screening guidelines vary. Current American College of Radiology guidelines recommend screening mammograms every year beginning at age 40. Please follow up as indicated or at the discretion of your referring provider.

Your mammogram indicates that your breast tissue is heterogeneously dense. Dense breast tissue is relatively common and is found in more than forty percent (40%) of women. The presence of dense breast tissue may make it more difficult to detect abnormalities in the breast and may be associated with an increased risk of breast cancer. We are providing this information to raise your awareness of this important factor and to encourage you to talk with your physician about this and other breast cancer risk factors. Together, you can decide which screening options are right for you. More information on breast density can be found on our website at www.cbispecialists.com/patients/breast-density

Although mammography is the most accurate method for early detection, not all cancers are found through mammography. Carolina Breast Imaging Specialists recommends women with dense breast tissue to consider adding whole breast screening ultrasound to their annual examination. We offer this service at our Greenville and Goldsboro locations using the GE Healthcare Invenia Automated Breast Ultrasound System which has been shown to increase cancer detection compared with standard mammography alone. For more information or to request an appointment please visit our website at www.cbispecialists.com/patients/ABUS

The results of this procedure have been sent to Dr. Darla Liles, MD. Those results and the images will become part of your medical record here at Carolina Breast Imaging Specialists, PLLC. It is your responsibility to inform any new health care provider of the date and location of this examination.

Please contact your health care provider if you notice any changes to your breasts or have any further questions.

Sincerely,

Carolina Breast Imaging Specialists, PLLC

Volpara Density Profile™

Your mammography images

Right breast Left breast

Your breast tissue composition

Your breast tissue composition is c (10.8% volumetric breast density). This means that you have high breast density.

To learn more about your breast composition and how to discuss it with your doctor, visit www.volparadensity.com/c
