

What is EQUIP?

EQUIP is a Food and Drug Administration (FDA) initiative that uses annual inspections to drive image quality improvement in mammography.

These inspections require reporting on three questions:

1. Corrective actions

2. Periodic image quality review

3. Quality control oversight

From compliance to quality

Compliance is essential. But EQUIP also provides a means for facilities to focus on real improvement. The FDA inspections have identified several areas that sites commonly struggle with in mammography accreditation:

- Inconsistent clinical image reviews
- Lack of oversight by lead IP or IP in reviews
- No image quality analysis when interpreting physicians (IP) review peers
- Inability to explain facility's process and provide documentation

“I’m impressed with Volpara’s EQUIP reports! I absolutely save time now. My experience with this has been wonderful.”

– Lead Technologist, Oaklawn Hospital

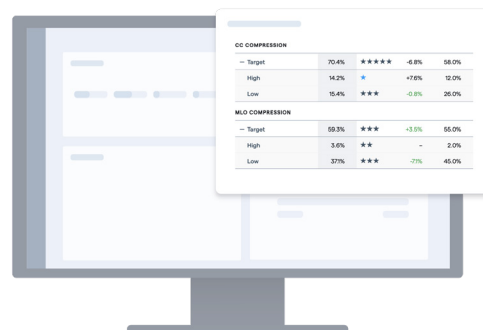

How can Volpara help my facility?

Volpara® Analytics™ software makes compliance prep easy, with features that help you address each inspection question.

1. Corrective actions

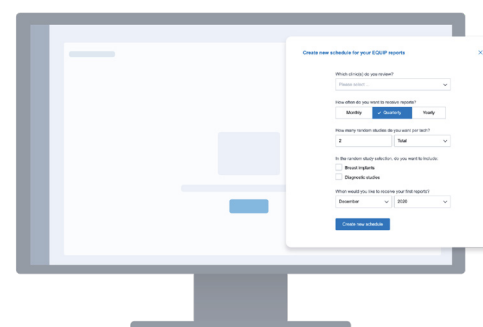

- Ability to go beyond the individual case
- Comprehensive objective trend reporting to identify areas staff can focus on

With Volpara® Patient Hub™ software, IPs can record corrective actions as soon as they notice image quality issues.

2. Periodic image quality review

- Randomly selected studies
- Templates that capture the 8 clinical image attributes listed in the MQSA
- Pre-populated data including TruPGMI™ and TruPressure™
- Fillable PDF and printable pages

Create new schedule for your QCIP reports

What study do you want?

How often do you want to review images?

How many random studies do you want per week?

In the random study selection, do you want to include:

What would you like to review your first report?

Create new schedule

3. Quality control oversight

- LIP QA/QC Attestation form, an easy sign-off sheet to demonstrate lead IP oversight of QA/QC and corrective action processes

Volpara Analytics

Volpara Analytics is the only software that provides automated and objective assessment of image quality on every mammogram.

Volpara Breast Health Platform

Analytics and Patient Hub are part of Volpara's software platform, which can easily be scaled as centers are added, volume increases, or patient care needs evolve. Additional integrated modules—including software for lung screening programs—can be quoted and configured at your request.
