

# Digital questionnaire for patient intake and risk assessment

As personalized breast screening programs become the standard of care, providing a good experience for patients is more important than ever. Collecting your patients' medical history information is an opportunity to empower them and determine their individual pathway for early detection.

Volpara® Patient Hub™ digital questionnaire software is an easy-to-use, tablet-based patient intake questionnaire that simplifies your clinical workflow and integrates risk assessment into your patient intake process.

## Simplify clinical workflow

### Simple questions, complete answers

Provide an easy and quick intake experience for all patients with a questionnaire designed for accessibility.

### Enhanced patient experience

Allow patients to review and easily make updates at their next appointment by storing information in Patient Hub software.

### Reduced staff time, increased accuracy

Save resources with patient completion of questionnaire and elimination of paper forms and manual data entry.

### Secure data

Safeguard your patients' protected health information (PHI) with a fully HIPAA-compliant system.

As part of Patient Hub, the digital questionnaire includes standard demographic questions.

Integrated risk assessment questions are available with Volpara® Risk™ software.

## Integrate risk assessment

### Comprehensive Risk Assessment

Include risk assessment questions for collection of personal and family history information during patient intake.

### Complete patient profile

Give radiologists a single view of your patient's lifetime risk of developing breast cancer—using the Tyrer-Cuzick risk model or others—during their reporting.

## Accessibility for patients

Providing inclusive, accessible care is vital to reaching all patients. The digital questionnaire has been designed in accordance with health literacy principles and the Web Content Accessibility Guidelines, an international standard for accessible design.

### Find out more about the Patient Hub questionnaire

To see how the Patient Hub questionnaire can streamline patient intake as part of your personalized screening program, contact your Volpara Health representative for a live demonstration, or visit us on the web.

### About Volpara

Volpara Health is a leading provider of breast imaging analytics and analysis products that improve clinical decision-making and the early detection of breast cancer. Volpara's science and technology, brought to life by your expertise, create a smarter approach to cancer detection and treatment.
